

An L-Shaped Array With Nonorthogonal Axes—Its Cramér–Rao Bound for Direction Finding

Dominic Makaa Kitavi, Kainam Thomas Wong, Chun-Chiu Hung

Abstract:

If a nominally L-shaped sensor-array's two legs are not exactly perpendicular, its azimuth-polar direction-of-arrival estimation would be degraded. This paper quantifies this degradation via a deterministic Cramér-Rao bound analysis of the direction-finding error variance.

Keywords

Legged locomotion, Sensor arrays, Estimation, Manifolds, Covariance matrices
